## Personal Statement

I am a self taught junior developer with several projects under my belt, seeking to step into the commercial industry and gain some real world exposure and experience. I have been studying and been exposed to various programming languages throughout the last year. Both on the front-end using languages such as HTML, CSS, Javascript, Bootstrap, React and on the back-end using languages like Python, Go and SQL. Furthermore, I have also created a couple of iOS apps and exhibit some familiarity developing mobile applications.

I have no formal training or tuition and shows that I can work on my own accord with little to no supervision. This shows I can tackle something new and challenging and with enough time and dedication I can achieve positive results which demonstrates I am adaptable and can learn and pick up new concepts quickly.

I am a team player who understands how important communication is and what it means to play my part to get the job done. I am a professional who possess the fundamentals of drive, discipline and teamwork required to do well in this field. I take in pride myself on being someone, who recognises the importance of delivering high products for their clients and as it ultimately affects how the company and individual is seen by current and potential clients.

## Core skills

- Skilled in developing applications in Python
- Good technical ability in client-side languages such as HTML5, CSS3, Javascript(ES5/6) and jQuery

- Deep understanding of design pattern and frameworks like Bootstrap, Django, Flask and React.js
- Experience in data structure and analysis tools such as Pandas and Numpy
- Practical capability in server-side techniques like Node.js, Express.js
- Knowledge working with relational and non-relational databases such as SQL and MongoDB
- Exposure to RESTful-API's
- Solid control of command-line interface using npm, bower, ipython, jupyter
- Proficient in a range of operating systems in to Windows, Ubuntu and MacOS
